

Rat Deoxyuridinetriphate ELISA Kit | DUTP elisa kit

Rat Deoxyuridinetriphate ELISA Kit

CATALOG #
AAA87006

REACTIVITY
Rat

PRODUCT SYNONYMS

Deoxyuridinetriphate; Rat Deoxyuridinetriphate ELISA Kit; DUTP elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Samples	Cell culture fluid & body fluid & tissue homogenate Serum or blood plasma
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for DUTP elisa kit

For Samples: Cell culture fluid & body fluid & tissue homogenate Serum or blood plasma

Intended Uses: This DUTP ELISA kit is intended for laboratory research use only. The stop solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of DUTP in the sample, this DUTP ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus DUTP concentration. The concentration of in the samples is then determined by comparing the O.D. of the samples to the standard curve.

Principle of the Assay: The coated well immunoenzymatic assay for the quantitative measurement of DUTP utilizes a monoclonal anti-DUTP antibody and an DUTP-HRP conjugate. The assay sample and buffer are incubated together with DUTP-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the DUTP concentration since DUTP from samples and DUTP-HRP conjugate compete for the anti-DUTP antibody binding site. Since the number of sites is limited, as more sites are occupied by DUTP from the sample, fewer sites are left to bind DUTP-HRP conjugate. Standards of known DUTP concentrations are run concurrently with the samples being assayed and a standard curve is plotted relating the intensity of the color (Optical Density) to the concentration of DUTP. The DUTP concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
