

Mouse angiotension I ELISA Kit | Ang-I elisa kit

Mouse angiotension I ELISA Kit

CATALOG #
AAA87491

REACTIVITY
Mouse

PRODUCT SYNONYMS

angiotension I; Mouse angiotension I ELISA Kit; angiotension I (Mouse); Ang-I elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 pg/mL.
Preparation and Storage	Store all reagents at 2-8 degree C

Intended Uses: This AngI ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse AngI. This ELISA kit for research use only!

Principle of the Assay: AngI ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-AngI antibody and an AngI-HRP conjugate. The assay sample and buffer are incubated together with AngI-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the AngI concentration since AngI from samples and AngI-HRP conjugate compete for the anti-AngI antibody binding site. Since the number of sites is limited, as more sites are occupied by AngI from the sample, fewer sites are left to bind AngI-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The AngI concentration in each sample is interpolated from this standard curve.

NCBI AND UNIPROT INFORMATION

NCBI GI #	386598
NCBI Official Full Name	angiotensin I, ANG I

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
