

Rat Pro-amylin (IAPP) ELISA Kit | IAPP elisa kit

Rat Pro-amylin (IAPP) ELISA Kit

CATALOG #
AAA87624

REACTIVITY
Rat

PRODUCT SYNONYMS

Pro-amylin (IAPP); Rat Pro-amylin (IAPP) ELISA Kit; IAPP elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Specificity	This assay has high sensitivity and excellent specificity for detection of ProIAPP. No significant cross-reactivity or interference between ProIAPP and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between ProIAPP and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for IAPP elisa kit	Intended Uses: This ProlAPP ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat ProlAPP. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: ProlAPP ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-ProlAPP antibody and an ProlAPP-HRP conjugate. The assay sample and buffer are incubated together with ProlAPP-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ProlAPP concentration since ProlAPP from samples and ProlAPP-HRP conjugate compete for the anti-ProlAPP antibody binding site. Since the number of sites is limited, as more sites are occupied by ProlAPP from the sample, fewer sites are left to bind ProlAPP-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ProlAPP concentration in each sample is interpolated from this standard curve.
Product Categories/Family for IAPP elisa kit	Cardiovascular

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
