

## Human Gastrin cell antibody ELISA Kit | GCA elisa kit

Human Gastrin cell antibody ELISA Kit

CATALOG #  
**AAA87956**

REACTIVITY  
**Human**

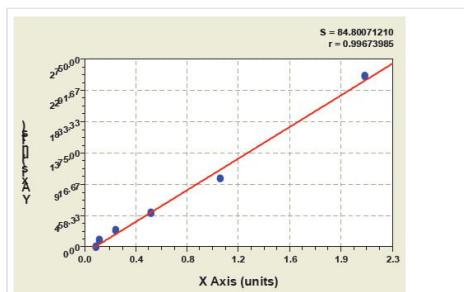

### PRODUCT SYNONYMS

Gastrin cell antibody; Human Gastrin cell antibody ELISA Kit; GCA elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                      |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                           |
| Assay Type              | Competitive or Sandwich                                                                                                                                                              |
| Detection Range         | 100-2500pg/mL                                                                                                                                                                        |
| Sensitivity             | 1.0pg/mL                                                                                                                                                                             |
| Intended Uses           | This GCA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human GCA. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                  |

### ADDITIONAL INFORMATION

#### Related Product Information for GCA elisa kit

**Principle of the Assay:** GCA ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for GCA. Standards or samples are then added to the microtiter plate wells and GCA if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of GCA present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for GCA are added to each well to "sandwich" the GCA immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain GCA and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The GCA concentration in each sample is interpolated from this standard curve.
