

Goat Thyroid antibody ELISA Kit | TAB elisa kit

Goat Thyroid antibody ELISA Kit

CATALOG #
AAA88116

REACTIVITY
Goat

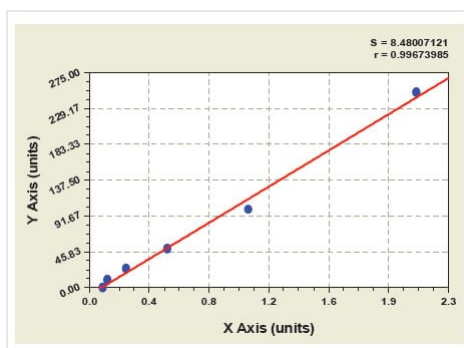

PRODUCT SYNONYMS

Thyroid antibody; Goat Thyroid antibody ELISA Kit; TAB elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Sensitivity	1.0 ng/mL.
Intended Uses	This TAB ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat TAB. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for TAB elisa kit

Principle of the assay: TAB ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with Thyroid antigen (TAB). Standards or samples are then added to the microtiter plate wells and TAB if present, will bind to the antigen pre-coated wells. In order to quantitatively determine the amount of TAB present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated Thyroid antigen (TAB) are added to each well to "sandwich" the TAB immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain TAB and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The TAB concentration in each sample is interpolated from this standard curve.

Product Categories/Family for TAB elisa kit

Metabolism

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
