

Goat Ornithine Decarboxylase ELISA Kit | ODC elisa kit

Goat Ornithine Decarboxylase ELISA Kit

CATALOG #
AAA88154

REACTIVITY
Goat

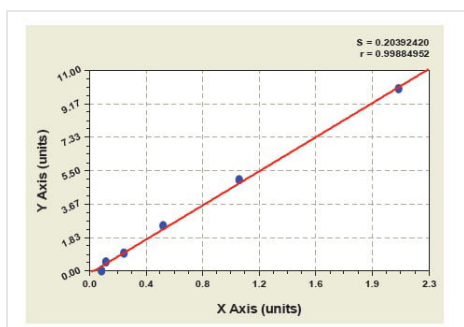

PRODUCT SYNONYMS

Ornithine Decarboxylase; Goat Ornithine Decarboxylase ELISA Kit; ODC elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Sensitivity	0.1 ng/mL.
Intended Uses	This ODC ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat ODC. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for ODC elisa kit

Principle of the assay: ODC ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for ODC. Standards or samples are then added to the microtiter plate wells and ODC if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of ODC present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for ODC are added to each well to "sandwich" the ODC immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain ODC and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ODC concentration in each sample is interpolated from this standard curve.
