

## Monkey Pepsin ELISA Kit | PP elisa kit

Monkey Pepsin ELISA Kit

CATALOG #  
**AAA88203**

REACTIVITY  
**Monkey**

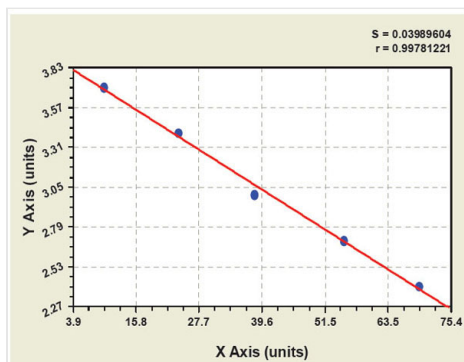

### PRODUCT SYNONYMS

Pepsin; Monkey Pepsin ELISA Kit; PP elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                             |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Monkey                                                                                                                                                                                      |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                                  |
| Assay Type              | Competitive                                                                                                                                                                                 |
| Detection Range         | 250-5000pg/mL                                                                                                                                                                               |
| Sensitivity             | 1.0pg/mL                                                                                                                                                                                    |
| Intended Uses           | This Pepsin ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey Pepsin. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                         |

### ADDITIONAL INFORMATION

#### Related Product Information for PP elisa kit

**Principle of the assay:** Pepsin ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-Pepsin antibody and an Pepsin-HRP conjugate. The assay sample and buffer are incubated together with Pepsin-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the Pepsin concentration since Pepsin from samples and Pepsin-HRP conjugate compete for the anti-Pepsin antibody binding site. Since the number of sites is limited, as more sites are occupied by Pepsin from the sample, fewer sites are left to bind Pepsin-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Pepsin concentration in each sample is interpolated from this standard curve.

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
