

Guinea Pig Antiphospholipid Antibody ELISA Kit | APLA elisa kit

Guinea pig Antiphospholipid Antibody ELISA Kit

CATALOG #
AAA88255

REACTIVITY
Guinea Pig

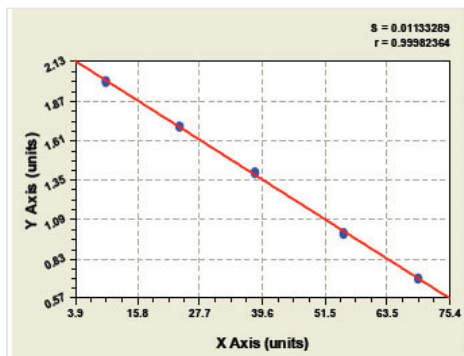

PRODUCT SYNONYMS

Antiphospholipid Antibody; Guinea pig Antiphospholipid Antibody ELISA Kit; APLA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Guinea Pig
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	5.0-100ng/mL
Sensitivity	1.0ng/mL
Intended Uses	This APLA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Guinea pig APLA. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

Related Product Information for APLA elisa kit

Principle of the Assay: APLA ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-APLA antibody and an APLA-HRP conjugate. The assay sample and buffer are incubated together with APLA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the APLA concentration since APLA from samples and APLA-HRP conjugate compete for the anti-APLA antibody binding site. Since the number of sites is limited, as more sites are occupied by APLA from the sample, fewer sites are left to bind APLA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The APLA concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
