

Canine Crystal proteins beta ELISA Kit | Crybeta elisa kit

Canine Crystal proteins beta ELISA Kit

CATALOG #
AAA88281

REACTIVITY
Canine

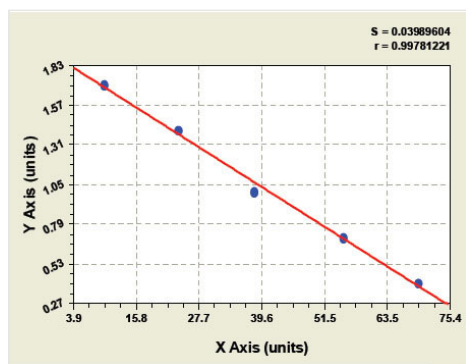

PRODUCT SYNONYMS

Crystal proteins beta; Canine Crystal proteins beta ELISA Kit; Canine Crystal proteins b ELISA Kit; Crybeta elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Canine
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	2.5-50ng/mL
Sensitivity	0.1ng/mL
Intended Uses	This Crybeta ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine Crybeta. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

Principle of the Assay: Crybeta ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-Crybeta antibody and an Crybeta-HRP conjugate. The assay sample and buffer are incubated together with Crybeta-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the Crybeta concentration since Crybeta from samples and Crybeta-HRP conjugate compete for the anti-Crybeta antibody binding site. Since the number of sites is limited, as more sites are occupied by Crybeta from the sample, fewer sites are left to bind Crybeta-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Crybeta concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
