

Rat Pro-Nerve Growth Factor 1 ELISA Kit | pro-NGF1 elisa kit

Rat Pro-Nerve Growth Factor 1 ELISA Kit

CATALOG #
AAA88341

REACTIVITY
Rat

PRODUCT SYNONYMS

Pro-Nerve Growth Factor 1; Rat Pro-Nerve Growth Factor 1 ELISA Kit; pro-NGF1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	10-2500pg/mL
Sensitivity	1.0pg/ml
Intended Uses	This proNGF1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat proNGF1. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for pro-NGF1 elisa kit

Principle of the Assay: pro-NGF1 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-pro-NGF1 antibody and an pro-NGF1-HRP conjugate. The assay sample and buffer are incubated together with pro-NGF1-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the pro-NGF1 concentration since pro-NGF1 from samples and pro-NGF1-HRP conjugate compete for the anti-pro-NGF1 antibody binding site. Since the number of sites is limited, as more sites are occupied by pro-NGF1 from the sample, fewer sites are left to bind pro-NGF1-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The pro-NGF1 concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
