

Goat Paraoxonase ELISA Kit | PON elisa kit

Goat Paraoxonase ELISA Kit

CATALOG #
AAA88377

REACTIVITY
Goat

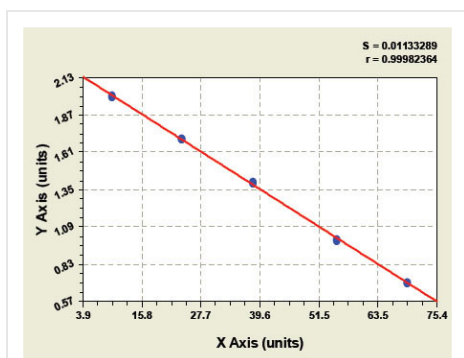

PRODUCT SYNONYMS

Paraoxonase; Goat Paraoxonase ELISA Kit; PON elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 ng/mL.
Intended Uses	This PON ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat PON. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for PON elisa kit

Principle of the Assay: PON ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-PON antibody and an PON-HRP conjugate. The assay sample and buffer are incubated together with PON-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PON concentration since PON from samples and PON-HRP conjugate compete for the anti-PON antibody binding site. Since the number of sites is limited, as more sites are occupied by PON from the sample, fewer sites are left to bind PON-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PON concentration in each sample is interpolated from this standard curve.

Neurobiology

NCBI AND UNIPROT INFORMATION

NCBI GI #	4105841
NCBI Official Full Name	paraoxonase

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
