

Canine E1/ubiquitin-activating enzyme ELISA Kit | E1 / UBAE elisa kit

Canine E1/ubiquitin-activating enzyme ELISA Kit

CATALOG #
AAA88403

REACTIVITY
Canine

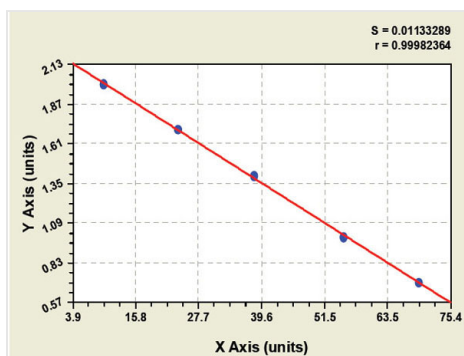

PRODUCT SYNONYMS

E1/ubiquitin-activating enzyme; Canine E1/ubiquitin-activating enzyme ELISA Kit; E1 / UBAE elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Canine
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0U/L.
Intended Uses	This E1/UBAE ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine E1/UBAE. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

Principle of the Assay: E1/UBAE ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-E1/UBAE antibody and an E1/UBAE-HRP conjugate. The assay sample and buffer are incubated together with E1/UBAE-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the E1/UBAE concentration since E1/UBAE from samples and E1/UBAE-HRP conjugate compete for the anti-E1/UBAE antibody binding site. Since the number of sites is limited, as more sites are occupied by E1/UBAE from the sample, fewer sites are left to bind E1/UBAE-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The E1/UBAE concentration in each sample is interpolated from this standard curve.
