

Canine Prolactin ELISA Kit | PRL elisa kit

Canine Prolactin ELISA Kit

CATALOG #
AAA88410

REACTIVITY
Canine

PRODUCT SYNONYMS

Prolactin; Canine Prolactin ELISA Kit; PRL elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Canine
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ng/mL.
Preparation and Storage	Store all reagents at 2-8 degree C.

Intended Uses: This PRL ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine PRL. This ELISA kit for research use only!

Principle of the Assay: PRL ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-PRL antibody and an PRL-HRP conjugate. The assay sample and buffer are incubated together with PRL-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PRL concentration since PRL from samples and PRL-HRP conjugate compete for the anti-PRL antibody binding site. Since the number of sites is limited, as more sites are occupied by PRL from the sample, fewer sites are left to bind PRL-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PRL concentration in each sample is interpolated from this standard curve.
