

Monkey Thromboglobulin, Beta ELISA Kit | bTG elisa kit

Monkey Thromboglobulin, Beta ELISA Kit

CATALOG #
AAA88767

REACTIVITY
Monkey

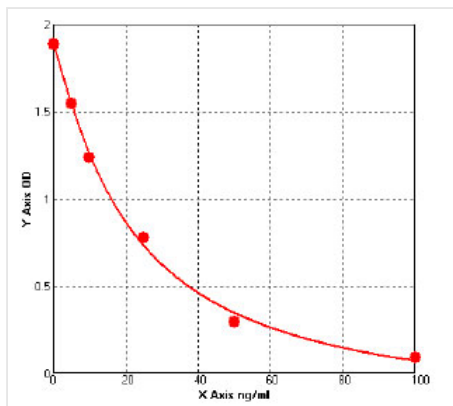

PRODUCT SYNONYMS

Thromboglobulin; Beta; Monkey Thromboglobulin; Beta ELISA Kit; bTG elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Specificity	This assay has high sensitivity and excellent specificity for detection of betaTG. No significant cross-reactivity or interference between betaTG and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between betaTG and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for bTG elisa kit	Intended Uses: This betaTG ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey betaTG. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: betaTG ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-betaTG antibody and an betaTG-HRP conjugate. The assay sample and buffer are incubated together with betaTG-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the betaTG concentration since betaTG from samples and betaTG-HRP conjugate compete for the anti-betaTG antibody binding site. Since the number of sites is limited, as more sites are occupied by betaTG from the sample, fewer sites are left to bind betaTG-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The betaTG concentration in each sample is interpolated from this standard curve.
Product Categories/Family for bTG elisa kit	Immunology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
