

## Canine Thrombus Precursor Protein ELISA Kit | TPP elisa kit

Canine Thrombus Precursor Protein ELISA Kit

CATALOG #  
**AAA88795**

REACTIVITY  
**Canine**

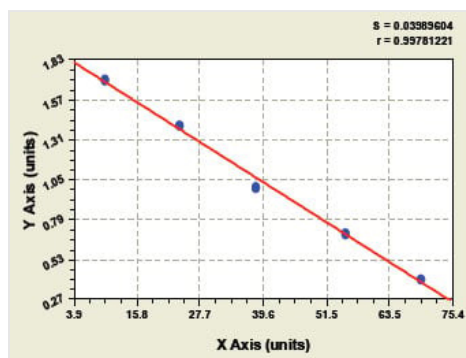

### PRODUCT SYNONYMS

Thrombus Precursor Protein; Canine Thrombus Precursor Protein ELISA Kit; TPP elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                       |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Canine                                                                                                                                                                                |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                            |
| Assay Type              | Sandwich                                                                                                                                                                              |
| Detection Range         | 0.5-10?g/mL                                                                                                                                                                           |
| Intended Uses           | This TpP ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine TpP. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                   |

### ADDITIONAL INFORMATION

#### Related Product Information for TPP elisa kit

**Principle of the Assay:** TpP ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-TpP antibody and an TpP-HRP conjugate. The assay sample and buffer are incubated together with TpP-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the TpP concentration since TpP from samples and TpP-HRP conjugate compete for the anti-TpP antibody binding site. Since the number of sites is limited, as more sites are occupied by TpP from the sample, fewer sites are left to bind TpP-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The TpP concentration in each sample is interpolated from this standard curve.

#### Product Categories/Family for TPP elisa kit

Cardiovascular

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
