ADDITIONAL INFORMATION

Related Product Information for AT2R1 elisa kit	Intended Uses: This A2R1Ab ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat A2R1Ab. This ELISA kit for research use only! Principle of the Assay: A2R1Ab ELISA kit applies the competitive enzyme immunoassay technique utilizing Angiotensin 2 Receptor 1antigen and an A2R1Ab-HRP conjugate. The assay sample and buffer are incubated together with A2R1Ab-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the A2R1Ab concentration since A2R1Ab from samples and A2R1Ab-HRP conjugate compete for the Angiotensin 2 Receptor 1antigen binding site. Since the number of sites is limited, as more sites are occupied by A2R1Ab from the sample, fewer sites are left to bind A2R1Ab-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The A2R1Ab concentration in each sample is interpolated from this standard curve.
