

Chicken N-acetyl-beta-D-glucosaminidase ELISA Kit | NAG elisa kit

Chicken N-acetyl-beta-D-glucosaminidase ELISA Kit

CATALOG #
AAA88903

REACTIVITY
Chicken

PRODUCT SYNONYMS

N-acetyl-beta-D-glucosaminidase; Chicken N-acetyl-beta-D-glucosaminidase ELISA Kit; Chicken N-acetyl-b-D-glucosaminidase ELISA Kit; NAG elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 pg/mL.
Intended Uses	This NAG ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken NAG. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for NAG elisa kit

Principle of the assay: NAG ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-NAG antibody and an NAG-HRP conjugate. The assay sample and buffer are incubated together with NAG-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the NAG concentration since NAG from samples and NAG-HRP conjugate compete for the anti-NAG antibody binding site. Since the number of sites is limited, as more sites are occupied by NAG from the sample, fewer sites are left to bind NAG-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The NAG concentration in each sample is interpolated from this standard curve.
