

Sheep alpha1-Microglobulin ELISA Kit | alpha1-MG elisa kit

Sheep alpha1-Microglobulin ELISA Kit

CATALOG #
AAA89003

REACTIVITY
Sheep

PRODUCT SYNONYMS

alpha1-Microglobulin; Sheep alpha1-Microglobulin ELISA Kit; Sheep a1-Microglobulin ELISA Kit; alpha1-MG elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Sheep
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Sensitivity	1.0 ng/mL.
Intended Uses	This ?1-MG ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Sheep ?1-MG. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

Principle of the assay: ?1-MG ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for ?1-MG. Standards or samples are then added to the microtiter plate wells and ?1-MG if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of ?1-MG present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for ?1-MG are added to each well to "sandwich" the ?1-MG immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain ?1-MG and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ?1-MG concentration in each sample is interpolated from this standard curve.
