

## Hyperglycosylated Porcine chorionic gonadotropin ELISA Kit | hCG-H elisa kit

Porcine Hyperglycosylated Porcine chorionic gonadotropin ELISA Kit

CATALOG #  
**AAA89023**

REACTIVITY  
**Porcine**

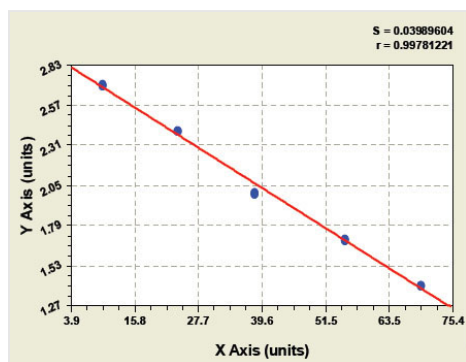

### PRODUCT SYNONYMS

Hyperglycosylated Porcine chorionic gonadotropin; Porcine Hyperglycosylated Porcine chorionic gonadotropin ELISA Kit; hCG-H elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                        |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Porcine                                                                                                                                                                                |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                             |
| Assay Type              | Competitive                                                                                                                                                                            |
| Sensitivity             | 1.0 nmol/L                                                                                                                                                                             |
| Intended Uses           | This HCG ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Porcine HCG. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                    |

### ADDITIONAL INFORMATION

#### Related Product Information for hCG-H elisa kit

**Principle of the Assay:** HCG ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-HCG antibody and an HCG-HRP conjugate. The assay sample and buffer are incubated together with HCG-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the HCG concentration since HCG from samples and HCG-HRP conjugate compete for the anti-HCG antibody binding site. Since the number of sites is limited, as more sites are occupied by HCG from the sample, fewer sites are left to bind HCG-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The HCG concentration in each sample is interpolated from this standard curve.

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
