

Goat Testosterone, Free ELISA Kit | FT elisa kit

Goat Testosterone, Free ELISA Kit

CATALOG #
AAA89066

REACTIVITY
Goat

PRODUCT SYNONYMS

Testosterone; Free; Goat Testosterone; Free ELISA Kit; FT elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Sensitivity	1.0 pg/mL.
Intended Uses	This FT ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat FT. This ELISA kit for research use only, not for therapeutic applications
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for FT elisa kit

Principle of the Assay: FT ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for IL-1. Standards or samples are then added to the microtiter plate wells and FT if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of FT present in the sample, a standardized preparation of horseradish peroxidase (FtRP) -conjugated polyclonal antibody, specific for FT are added to each well to "sandwich" the FT immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain FT and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted FTing the intensity of the color (O.D.) to the concentration of standards. The FT concentration in each sample is interpolated from this standard curve.

Product Categories/Family for FT elisa kit

Metabolism

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
