

## Monkey Prolactin ELISA Kit | PRL elisa kit

Monkey Prolactin ELISA Kit

CATALOG #  
**AAA89174**

REACTIVITY  
**Monkey**

### PRODUCT SYNONYMS

Prolactin; Monkey Prolactin ELISA Kit; PRL elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                            |
|-------------------------|----------------------------------------------------------------------------|
| Reactivity              | Monkey                                                                     |
| Samples                 | Serum, Plasma, Cell Culture Supernatants, Body Fluid And Tissue Homogenate |
| Assay Type              | Quantitative Competitive                                                   |
| Sensitivity             | 1.0 ng/mL.                                                                 |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                        |

### ADDITIONAL INFORMATION

#### Related Product Information for PRL elisa kit

**Intended Uses:** This PRL ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken PRL. This ELISA kit for research use only!

**Principle of the Assay:** PRL ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-PRL antibody and an PRL-HRP conjugate. The assay sample and buffer are incubated together with PRL-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PRL concentration since PRL from samples and PRL-HRP conjugate compete for the anti-PRL antibody binding site. Since the number of sites is limited, as more sites are occupied by PRL from the sample, fewer sites are left to bind PRL-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PRL concentration in each sample is interpolated from this standard curve.
