

Sheep beta Defensins ELISA Kit | BDF elisa kit

Sheep beta Defensins ELISA Kit

CATALOG #
AAA89214

REACTIVITY
Sheep

PRODUCT SYNONYMS

beta Defensins; Sheep beta Defensins ELISA Kit; Sheep b Defensins ELISA Kit; BDF elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Sheep
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Sensitivity	1.0 ug/mL.
Intended Uses	This BDF ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Sheep BDF. This ELISA kit for research use only, not for therapeutic applications
Preparation and Storage	Store all reagents at 2-8 degree C.

Principle of the Assay: BDF ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for BDF. Standards or samples are then added to the microtiter plate wells and BDF if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of BDF present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for BDF are added to each well to "sandwich" the BDF immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain BDF and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The BDF concentration in each sample is interpolated from this standard curve.
