

Chicken Transforming Growth Factor 1 ELISA Kit | TGF1 elisa kit

Chicken Transforming Growth Factor 1 ELISA Kit

CATALOG #
AAA89347

REACTIVITY
Chicken

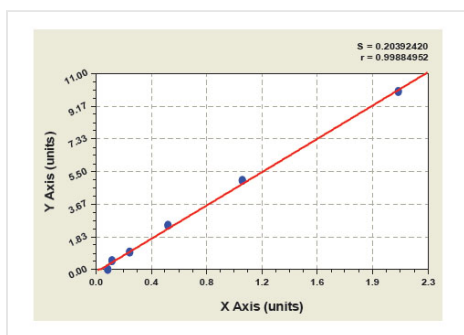

PRODUCT SYNONYMS

Transforming Growth Factor 1; Chicken Transforming Growth Factor 1 ELISA Kit; TGF1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Sensitivity	1.0pg/mL.
Intended Uses	This TGF1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken TGF1. This ELISA kit for research use only, not for therapeutic applications
Intra-assay Precision	This assay has high sensitivity and excellent specificity for detection of TGF1. No significant cross-reactivity or interference between TGF1 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between TGF1 and all the analogues, therefore, cross reaction may still exist in some cases.
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for TGF1 elisa kit	Principle of the assay: TGF1 ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for TGF1. Standards or samples are then added to the microtiter plate wells and TGF1 if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of TGF1 present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for TGF1 are added to each well to "sandwich" the TGF1 immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain TGF1 and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The TGF1 concentration in each sample is interpolated from this standard curve.
Product Categories/Family for TGF1 elisa kit	Cancer

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
