

## Goat Gremlin 1 ELISA Kit | GREM1 elisa kit

Goat Gremlin 1 ELISA Kit

CATALOG #  
**AAA89725**

REACTIVITY  
**Goat**

### PRODUCT SYNONYMS

Gremlin 1; Goat Gremlin 1 ELISA Kit; GREM1 elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                         |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Goat                                                                                                                                                                                    |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                              |
| Assay Type              | Competitive                                                                                                                                                                             |
| Sensitivity             | 0.1 ng/mL.                                                                                                                                                                              |
| Intended Uses           | This GREM1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat GREM1. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                     |

### ADDITIONAL INFORMATION

#### Related Product Information for GREM1 elisa kit

**Principle of the Assay:** GREM1 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-GREM1 antibody and an GREM1-HRP conjugate. The assay sample and buffer are incubated together with GREM1-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the GREM1 concentration since GREM1 from samples and GREM1-HRP conjugate compete for the anti-GREM1 antibody binding site. Since the number of sites is limited, as more sites are occupied by GREM1 from the sample, fewer sites are left to bind GREM1-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The GREM1 concentration in each sample is interpolated from this standard curve.
