

Goat Prohibitin ELISA Kit | PHB elisa kit

Goat Prohibitin ELISA Kit

CATALOG #
AAA89763

REACTIVITY
Goat

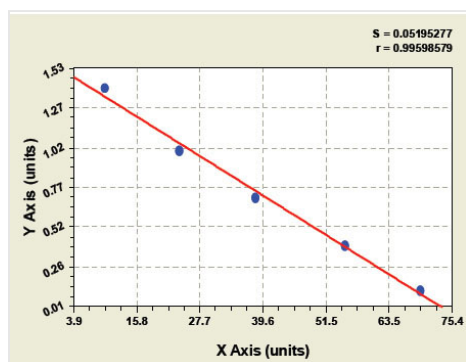

PRODUCT SYNONYMS

Prohibitin; Goat Prohibitin ELISA Kit; PHB elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	0.1 ng/mL.
Intended Uses	This PHB ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat PHB. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for PHB elisa kit

Principle of the Assay: PHB ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-PHB antibody and an PHB-HRP conjugate. The assay sample and buffer are incubated together with PHB-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PHB concentration since PHB from samples and PHB-HRP conjugate compete for the anti-PHB antibody binding site. Since the number of sites is limited, as more sites are occupied by PHB from the sample, fewer sites are left to bind PHB-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PHB concentration in each sample is interpolated from this standard curve.
