INTENDED USE This KLK8 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Sheep KLK8. This ELISA kit for research use only!

PRINCIPLE OF THE ASSAY KLK8 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-KLK8 antibody and an KLK8-HRP conjugate. The assay sample and buffer are incubated together with KLK8-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the KLK8 concentration since KLK8 from samples and KLK8-HRP conjugate compete for the anti-KLK8 antibody binding site. Since the number of sites is limited, as more sites are occupied by KLK8 from the sample, fewer sites are left to bind KLK8-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The KLK8 concentration in each sample is interpolated from this standard curve.
