

## Monkey Myoglobin ELISA Kit | MYO/MB elisa kit

Monkey Myoglobin ELISA Kit

CATALOG #  
**AAA89991**

REACTIVITY  
**Monkey**

### PRODUCT SYNONYMS

Myoglobin; Monkey Myoglobin ELISA Kit; MYO/MB elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                       |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Monkey                                                                                                                                                                                |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                            |
| Assay Type              | Sandwich                                                                                                                                                                              |
| Detection Range         | 50-1000pg/mL                                                                                                                                                                          |
| Sensitivity             | 1.0pg/mL                                                                                                                                                                              |
| Intended Uses           | This MYO ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey MYO. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                   |

### ADDITIONAL INFORMATION

#### Related Product Information for MYO/MB elisa kit

**Principle of the Assay:** MYO ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-MYO antibody and an MYO-HRP conjugate. The assay sample and buffer are incubated together with MYO-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the MYO concentration since MYO from samples and MYO-HRP conjugate compete for the anti-MYO antibody binding site. Since the number of sites is limited, as more sites are occupied by MYO from the sample, fewer sites are left to bind MYO-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The MYO concentration in each sample is interpolated from this standard curve.
