INTENDED USE This SEMA7A ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Sheep SEMA7A. This ELISA kit for research use only!

PRINCIPLE OF THE ASSAY SEMA7A ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-SEMA7A antibody and an SEMA7A-HRP conjugate. The assay sample and buffer are incubated together with SEMA7A-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the SEMA7A concentration since SEMA7A from samples and SEMA7A-HRP conjugate compete for the anti-SEMA7A antibody binding site. Since the number of sites is limited, as more sites are occupied by SEMA7A from the sample, fewer sites are left to bind SEMA7A-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The SEMA7A concentration in each sample is interpolated from this standard curve.
