

## Porcine Dopamine ELISA Kit | DPA elisa kit

Porcine Dopamine ELISA Kit

CATALOG #  
**AAA90372**

REACTIVITY  
**Porcine**

### PRODUCT SYNONYMS

Dopamine; Porcine Dopamine ELISA Kit; DPA elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                        |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Porcine                                                                                                                                                                                |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                             |
| Assay Type              | Competitive                                                                                                                                                                            |
| Sensitivity             | 1.0 ng/mL.                                                                                                                                                                             |
| Intended Uses           | This DPA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Porcine DPA. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                    |

### ADDITIONAL INFORMATION

Related Product Information for DPA elisa kit

**Principle of the assay:** DPA ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-DPA antibody and an DPA-HRP conjugate. The assay sample and buffer are incubated together with DPA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the DPA concentration since DPA from samples and DPA-HRP conjugate compete for the anti-DPA antibody binding site. Since the number of sites is limited, as more sites are occupied by DPA from the sample, fewer sites are left to bind DPA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The DPA concentration in each sample is interpolated from this standard curve.

Product Categories/Family for DPA elisa kit

Neurobiology

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
