

Chicken Platelet Derived Growth Factor Subunit A ELISA Kit | PDGFA elisa kit

Chicken Platelet Derived Growth Factor Subunit A ELISA Kit

CATALOG #
AAA90569

REACTIVITY
Chicken

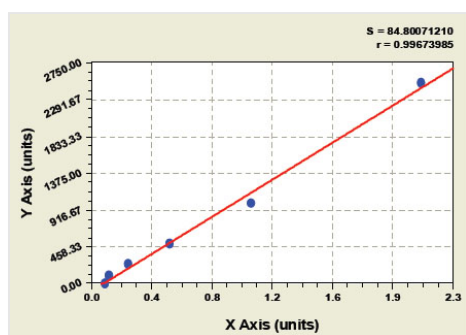

PRODUCT SYNONYMS

Platelet Derived Growth Factor Subunit A; Chicken Platelet Derived Growth Factor Subunit A ELISA Kit; PDGFA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Sensitivity	1.0 pg/mL.
Intended Uses	This PDGFA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken PDGFA. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

Principle of the Assay: PDGFA ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for PDGFA. Standards or samples are then added to the microtiter plate wells and PDGFA if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of PDGFA present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for PDGFA are added to each well to "sandwich" the PDGFA immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain PDGFA and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PDGFA concentration in each sample is interpolated from this standard curve.
