

Goat Cross-linked C-terminal Telopectides of type II collagen ELISA Kit | CTX-II elisa kit

Goat Cross-linked C-terminal Telopectides of type II collagen ELISA Kit

CATALOG #
AAA90801

REACTIVITY
Goat

PRODUCT SYNONYMS

Cross-linked C-terminal Telopectides of type II collagen; Goat Cross-linked C-terminal Telopectides of type II collagen ELISA Kit; CTX-II elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 pg/mL.
Intended Uses	This CTX-II ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat CTX-II. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

Principle of the Assay: CTX-II ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-CTX-II antibody and an CTX-II-HRP conjugate. The assay sample and buffer are incubated together with CTX-II-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CTX-II concentration since CTX-II from samples and CTX-II-HRP conjugate compete for the anti-CTX-II antibody binding site. Since the number of sites is limited, as more sites are occupied by CTX-II from the sample, fewer sites are left to bind CTX-II-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CTX-II concentration in each sample is interpolated from this standard curve.
