Related Product Information for SRPX2 elisa kit	For samples: Serum, plasma, cell culture supernatants, body fluid and tissue homogenate INTENDED USE This SRPX2 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit SRPX2. This ELISA kit for research use only! PRINCIPLE OF THE ASSAY SRPX2 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-SRPX2 antibody and an SRPX2-HRP conjugate. The assay sample and buffer are incubated together with SRPX2-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the SRPX2 concentration since SRPX2 from samples and SRPX2-HRP conjugate compete for the anti-SRPX2 antibody binding site. Since the number of sites is limited, as more sites are occupied by SRPX2 from the sample, fewer sites are left to bind SRPX2-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The SRPX2 concentration in each sample is interpolated from this standard curve.
