

Chicken Free Prostate Specific Antigen ELISA Kit | FPSA elisa kit

Chicken Free Prostate Specific Antigen ELISA Kit

CATALOG #
AAA90922

REACTIVITY
Chicken

PRODUCT SYNONYMS

Free Prostate Specific Antigen; Chicken Free Prostate Specific Antigen ELISA Kit; FPSA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	0.1 ng/mL.
Intended Uses	This FPSA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken FPSA. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for FPSA elisa kit

Principle of the assay: FPSA ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-FPSA antibody and an FPSA-HRP conjugate. The assay sample and buffer are incubated together with FPSA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the FPSA concentration since FPSA from samples and FPSA-HRP conjugate compete for the anti-FPSA antibody binding site. Since the number of sites is limited, as more sites are occupied by FPSA from the sample, fewer sites are left to bind FPSA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The FPSA concentration in each sample is interpolated from this standard curve.
