

Goat Protein S ELISA Kit | PROS elisa kit

Goat Protein S ELISA Kit

CATALOG #
AAA90939

REACTIVITY
Goat

PRODUCT SYNONYMS

Protein S; Goat Protein S ELISA Kit; PROS elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0u g/mL.
Intended Uses	This PROS ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat PROS. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for PROS elisa kit

Principle of the Assay: PROS ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-PROS antibody and an PROS-HRP conjugate. The assay sample and buffer are incubated together with PROS-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PROS concentration since PROS from samples and PROS-HRP conjugate compete for the anti-PROS antibody binding site. Since the number of sites is limited, as more sites are occupied by PROS from the sample, fewer sites are left to bind PROS-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PROS concentration in each sample is interpolated from this standard curve.

Cardiovascular

NCBI AND UNIPROT INFORMATION

NCBI GI #	7717469
NCBI Official Full Name	protein S

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
