

Human Antiphospholipid Antibody ELISA Kit | APLA elisa kit

Human Antiphospholipid Antibody ELISA Kit

CATALOG #
AAA90990

REACTIVITY
Human

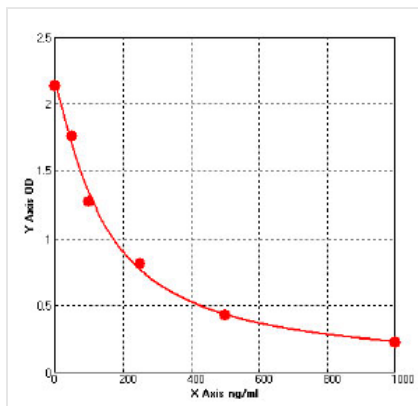

PRODUCT SYNONYMS

Antiphospholipid Antibody; Human Antiphospholipid Antibody ELISA Kit; APLA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of APAb. No significant cross-reactivity or interference between APAb and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between APAb and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for APLA elisa kit	Intended Uses: This APAb ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human APAb. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: APAb ELISA kit applies the competitive enzyme immunoassay technique utilizing Phospholipid antigen and an APAb-HRP conjugate. The assay sample and buffer are incubated together with APAb-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the APAb concentration since APAb from samples and APAb-HRP conjugate compete for the Phospholipid antigen binding site. Since the number of sites is limited, as more sites are occupied by APAb from the sample, fewer sites are left to bind APAb-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The APAb concentration in each sample is interpolated from this standard curve.
Product Categories/Family for APLA elisa kit	Cell Biology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
