INTENDED USE This CNTN1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat CNTN1. This ELISA kit for research use only!

PRINCIPLE OF THE ASSAY CNTN1 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-CNTN1 antibody and an CNTN1-HRP conjugate. The assay sample and buffer are incubated together with CNTN1-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CNTN1 concentration since CNTN1 from samples and CNTN1-HRP conjugate compete for the anti-CNTN1 antibody binding site. Since the number of sites is limited, as more sites are occupied by CNTN1 from the sample, fewer sites are left to bind CNTN1-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CNTN1 concentration in each sample is interpolated from this standard curve.
