

Mouse Vascular Endothelial cell Growth Factor ELISA Kit | VEGF elisa kit

Mouse Vascular Endothelial cell Growth Factor ELISA Kit

CATALOG #
AAA91189

REACTIVITY
Mouse

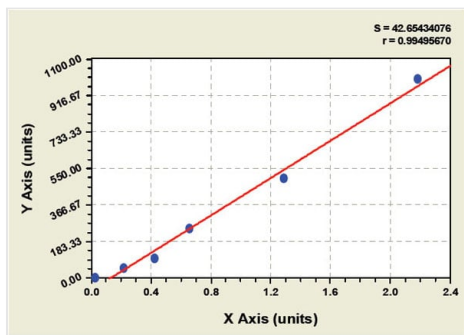

PRODUCT SYNONYMS

Vascular Endothelial cell Growth Factor; Mouse Vascular Endothelial cell Growth Factor ELISA Kit; VEGF elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Detection Range	0.5-10ng/mL
Sensitivity	0.1ng/mL
Intended Uses	This VEGF ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse VEGF. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for VEGF elisa kit

Principle of the Assay: VEGF ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for VEGF. Standards or samples are then added to the microtiter plate wells and VEGF if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of VEGF present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for VEGF are added to each well to "sandwich" the VEGF immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain VEGF and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The VEGF concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
