

Canine Neurokinin A ELISA Kit | NKA elisa kit

Canine Neurokinin A ELISA Kit

CATALOG #
AAA91209

REACTIVITY
Canine

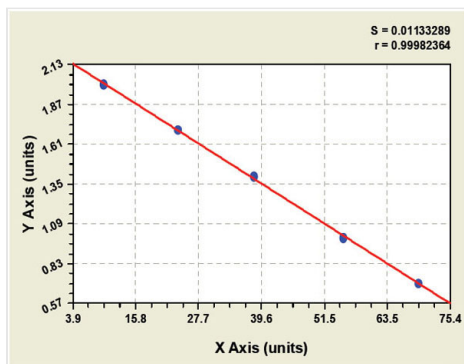

PRODUCT SYNONYMS

Neurokinin A; Canine Neurokinin A ELISA Kit; NKA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Canine
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	5.0-100ng/mL
Sensitivity	1.0ng/mL
Intended Uses	This NKA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine NKA. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for NKA elisa kit

Principle of the Assay: NKA ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-NKA antibody and an NKA-HRP conjugate. The assay sample and buffer are incubated together with NKA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the NKA concentration since NKA from samples and NKA-HRP conjugate compete for the anti-NKA antibody binding site. Since the number of sites is limited, as more sites are occupied by NKA from the sample, fewer sites are left to bind NKA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The NKA concentration in each sample is interpolated from this standard curve.
