INTENDED USE This PLA1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat PLA1. This ELISA kit for research use only!

PRINCIPLE OF THE ASSAY PLA1 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-PLA1 antibody and an PLA1-HRP conjugate. The assay sample and buffer are incubated together with PLA1-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PLA1 concentration since PLA1 from samples and PLA1-HRP conjugate compete for the anti-PLA1 antibody binding site. Since the number of sites is limited, as more sites are occupied by PLA1 from the sample, fewer sites are left to bind PLA1-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PLA1 concentration in each sample is interpolated from this standard curve.
