

Chicken Immunoglobulin A ELISA Kit | IgA elisa kit

Chicken Immunoglobulin A ELISA Kit

CATALOG #
AAA91374

REACTIVITY
Chicken

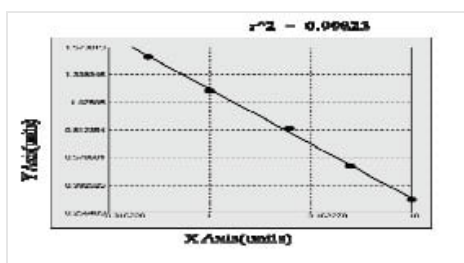

PRODUCT SYNONYMS

Immunoglobulin A; Chicken Immunoglobulin A ELISA Kit; IgA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	0.1 mg/ml.
Preparation and Storage	Store all reagents at 2-8 degree C

Related Product Information for IgA elisa kit

Intended Uses: This IgA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken IgA. This ELISA kit for research use only!

Principle of the Assay||IgA ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-IgA antibody and an IgA-HRP conjugate. The assay sample and buffer are incubated together with IgA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the IgA concentration since IgA from samples and IgA-HRP conjugate compete for the anti-IgA antibody binding site. Since the number of sites is limited, as more sites are occupied by IgA from the sample, fewer sites are left to bind IgA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The IgA concentration in each sample is interpolated from this standard curve.
