

Porcine Complement Factor P ELISA Kit | CFP elisa kit

Porcine Complement Factor P ELISA Kit

CATALOG #
AAA91395

REACTIVITY
Porcine

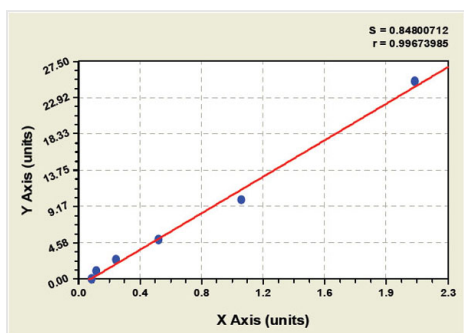

PRODUCT SYNONYMS

Complement Factor P; Porcine Complement Factor P ELISA Kit; CFP elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Porcine
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Sensitivity	0.1 ng/mL.
Intended Uses	This CFP ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Porcine CFP. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for CFP elisa kit

Principle of the Assay: CFP ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for CFP. Standards or samples are then added to the microtiter plate wells and CFP if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of CFP present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for CFP are added to each well to "sandwich" the CFP immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain CFP and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CFP concentration in each sample is interpolated from this standard curve.
