

## Canine cholesterol ELISA Kit | CH elisa kit

Canine cholesterol ELISA Kit

CATALOG #  
**AAA91680**

REACTIVITY  
**Canine**

### PRODUCT SYNONYMS

cholesterol; Canine cholesterol ELISA Kit; CH elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Canine                                                                                                                                                                                                                                                                                                                                                                                |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of CHL. No significant cross-reactivity or interference between CHL and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between CHL and all the analogues, therefore, cross reaction may still exist in some cases. |
| Assay Type              | Quantitative Competitive                                                                                                                                                                                                                                                                                                                                                              |
| Samples                 | Serum, plasma, cell culture supernatants, body fluid and tissue homogenate                                                                                                                                                                                                                                                                                                            |
| Sensitivity             | 0.1 mmol/L                                                                                                                                                                                                                                                                                                                                                                            |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                                                                                                                                                                                                                   |

| Related Product Information for CH elisa kit | <p>Principle of the Assay: CHL ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-CHL antibody and an CHL-HRP conjugate. The assay sample and buffer are incubated together with CHL-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CHL concentration since CHL from samples and CHL-HRP conjugate compete for the anti-CHL antibody binding site. Since the number of sites is limited, as more sites are occupied by CHL from the sample, fewer sites are left to bind CHL-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CHL concentration in each sample is interpolated from this standard curve.</p> <p>Intended Uses: This CHL ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine CHL. This ELISA kit for research use only, not for therapeutic or test applications!</p> |

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
