

Canine Immunoglobulin A ELISA Kit | IgA elisa kit

Canine Immunoglobulin A ELISA Kit

CATALOG #
AAA91953

REACTIVITY
Canine

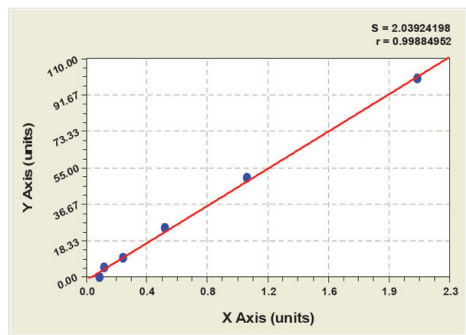

PRODUCT SYNONYMS

Immunoglobulin A; Canine Immunoglobulin A ELISA Kit; IgA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Canine
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	5.0-100ug/mL
Sensitivity	1.0ug/mL
Intended Uses	This IGA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse IGA. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

Related Product Information for IgA elisa kit

Principle of the Assay: IGA ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for IGA. Standards or samples are then added to the microtiter plate wells and IGA if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of IGA present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for IGA are added to each well to "sandwich" the IGA immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain IGA and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The IGA concentration in each sample is interpolated from this standard curve.
