

Chicken Total Endothelin ELISA Kit | ET elisa kit

Chicken Total Endothelin ELISA Kit

CATALOG #
AAA91995

REACTIVITY
Chicken

PRODUCT SYNONYMS

Total Endothelin; Chicken Total Endothelin ELISA Kit; ET elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 pg/mL.
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for ET elisa kit

For samples: Serum, plasma, cell culture supernatants, body fluid and tissue homogenate

INTENDED USE This END ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken END. This ELISA kit for research use only!

PRINCIPLE OF THE ASSAY END ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-END antibody and an END-HRP conjugate. The assay sample and buffer are incubated together with END-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the END concentration since END from samples and END-HRP conjugate compete for the anti-END antibody binding site. Since the number of sites is limited, as more sites are occupied by END from the sample, fewer sites are left to bind END-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The END concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
