

Monkey Phosphorylated acetyl -COA catboxylase ELISA Kit | PACCCase elisa kit

Monkey Phosphorylated acetyl -COA catboxylase ELISA Kit

CATALOG #
AAA92534

REACTIVITY
Monkey

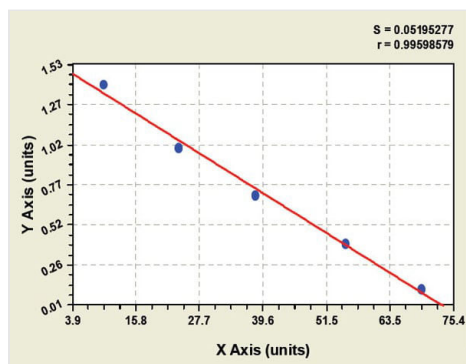

PRODUCT SYNONYMS

Phosphorylated acetyl -COA catboxylase; Monkey Phosphorylated acetyl -COA catboxylase ELISA Kit; PACCCase elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	250-5000pg/mL
Sensitivity	1.0pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

Related Product Information for PACCCase elisa kit

Intended Uses: This PACCCase ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey PACCCase. This ELISA kit for research use only!

Principle of the Assay: PACCCase ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-PACCCase antibody and an PACCCase-HRP conjugate. The assay sample and buffer are incubated together with PACCCase-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PACCCase concentration since PACCCase from samples and PACCCase-HRP conjugate compete for the anti-PACCCase antibody binding site. Since the number of sites is limited, as more sites are occupied by PACCCase from the sample, fewer sites are left to bind PACCCase-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PACCCase concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
