

Monkey Growth Differentiation Factor 15 ELISA Kit | GDF15 elisa kit

Monkey Growth Differentiation Factor 15 ELISA Kit

CATALOG #
AAA93090

REACTIVITY
Monkey

PRODUCT SYNONYMS

Growth Differentiation Factor 15; Monkey Growth Differentiation Factor 15 ELISA Kit; GDF15 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Samples	Serum, Plasma, Cell Culture Supernatants, Body Fluid And Tissue Homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 pg/mL.
Preparation and Storage	Store all reagents at 2-8 degree C.

Intended Uses: This GCSF ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Porcine GCSF. This ELISA kit for research use only!

Principle of the Assay: GCSF ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-GCSF antibody and an GCSF-HRP conjugate. The assay sample and buffer are incubated together with GCSF-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the GCSF concentration since GCSF from samples and GCSF-HRP conjugate compete for the anti-GCSF antibody binding site. Since the number of sites is limited, as more sites are occupied by GCSF from the sample, fewer sites are left to bind GCSF-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The GCSF concentration in each sample is interpolated from this standard curve.
