

Monkey Alkaline Sphingomyelinase ELISA Kit | alk-Smase elisa kit

Monkey Alkaline Sphingomyelinase ELISA Kit

CATALOG #
AAA93102

REACTIVITY
Monkey

PRODUCT SYNONYMS

Alkaline Sphingomyelinase; Monkey Alkaline Sphingomyelinase ELISA Kit; alk-Smase elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Detection Range	1.0-25ng/mL
Sensitivity	0.1ng/mL
Intended Uses	This Alk-Smase ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey Alk-Smase. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for alk-Smase elisa kit

Principle of the Assay: Alk-Smase ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for Alk-Smase. Standards or samples are then added to the microtiter plate wells and Alk-Smase if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of Alk-Smase present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for Alk-Smase are added to each well to "sandwich" the Alk-Smase immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain Alk-Smase and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Alk-Smase concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
