INTENDED USE This C7 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Bovine C7. This ELISA kit for research use only!

PRINCIPLE OF THE ASSAY C7 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-C7 antibody and an C7-HRP conjugate. The assay sample and buffer are incubated together with C7-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the C7 concentration since C7 from samples and C7-HRP conjugate compete for the anti-C7 antibody binding site. Since the number of sites is limited, as more sites are occupied by C7 from the sample, fewer sites are left to bind C7-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The C7 concentration in each sample is interpolated from this standard curve.
