Intended Uses: This sIL1R4/ST2 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse sIL1R4/ST2. This ELISA kit for research use only!

Principle of the Assay: sIL1R4/ST2 ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-sIL1R4/ST2 antibody and an sIL1R4/ST2-HRP conjugate. The assay sample and buffer are incubated together with sIL1R4/ST2-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the sIL1R4/ST2 concentration since sIL1R4/ST2 from samples and sIL1R4/ST2-HRP conjugate compete for the anti-sIL1R4/ST2 antibody binding site. Since the number of sites is limited, as more sites are occupied by sIL1R4/ST2 from the sample, fewer sites are left to bind sIL1R4/ST2-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The sIL1R4/ST2 concentration in each sample is interpolated from this standard curve.
