

Canine Concanavalin A ELISA Kit | ConA elisa kit

Canine Concanavalin A ELISA Kit

CATALOG #
AAA93276

REACTIVITY
Canine

PRODUCT SYNONYMS

Concanavalin A; Canine Concanavalin A ELISA Kit; ConA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Canine
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Detection Range	0.5-10ng/mL
Sensitivity	0.1ng/mL
Intended Uses	This ConA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine ConA. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for ConA elisa kit

Principle of the Assay: ConA ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for ConA. Standards or samples are then added to the microtiter plate wells and ConA if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of ConA present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for ConA are added to each well to "sandwich" the ConA immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain ConA and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ConA concentration in each sample is interpolated from this standard curve.
